Technical Skills

Languages: Java, Python, JavaScript, TypeScript, HTML/CSS
Frameworks: React, Next.js, Node.js, Spring Boot, Tailwind CSS
Tools & Platforms: Git, GitHub, Docker, VS Code, IntelliJ, Supabase, Vercel, PostgreSQL

Experience

Software Engineering Intern — Dementia Aide **Sept 2025 – Present**
Cupertino, CA | Concurrent with Target role below
Python | FastAPI | Claude API | Next.js | TypeScript | Shopify Storefront API | Stripe | Radix UI

- Built the safety layer for a RAG-based caregiver assistant: emergency detection that screens every question before retrieval, combining rules across 9 emergency categories with a Claude classifier for ambiguous wording, and escalating by default when uncertain.
- Built an evaluation framework combining deterministic checks, a structured-output LLM judge, and blind human review, with evaluator-versus-human agreement metrics and CI-ready quality thresholds.
- Added retrieval confidence scoring and abstention so the assistant declines instead of guessing; compared Claude, GPT, and Gemini on cost, latency, and answer quality and designed a provider-agnostic generation interface.
- Designed and built a full-stack caregiver platform as the sole engineer, translating Figma prototypes into a production Next.js/ TypeScript app (frontend, backend, database schema); integrated Shopify's Storefront GraphQL API and Stripe for cart creation, checkout, and a searchable product catalog (dementia-aide.vercel.app).
- Engineered a deterministic query classifier (weighted keyword scoring, synonym expansion) routing caregiver questions into 13+ care scenarios, plus urgent-safety detection that surfaces sourced guidance from the CDC, National Institute on Aging, and Alzheimer's Association.

Fulfillment Expert Team Captain — Target **Dec 2022 – Present**
Colma, CA | Part-time, concurrent with internship above

- Led and coordinated a team of 15–18 team members daily, delegating tasks and ensuring goals and deadlines were consistently met.
- Partnered with Team Leaders and Executive Team Leaders across 3 departments to align priorities and maintain efficient store operations.
- Identified and implemented process improvements that increased team efficiency and throughput.

Projects

FulfillFlow — Warehouse Order Fulfillment API **Jun 2026**
Java 21 | Spring Boot | PostgreSQL | RabbitMQ | Redis | Docker

- Built a Spring Boot REST API for warehouse order fulfillment with JWT role-based authorization, OpenAPI documentation, and a fully Dockerized infrastructure.
- Prevented inventory overselling and duplicate reservations using PostgreSQL transactions, row-level locking, and idempotency keys.
- Implemented reliable asynchronous processing with a transactional outbox pattern, RabbitMQ retries and dead-letter queues, Redis caching, and end-to-end GitHub Actions test coverage.

Internship Radar — Automated Job Board Aggregator **Aug 2026**
Node.js | GitHub Actions | Discord API | CSV data pipeline

- Built a dependency-free Node.js tool that aggregates internship postings directly from Greenhouse, Lever, and Ashby's public APIs, ranks them by fit, and tracks applications in a CSV that preserves user edits across runs.
- Automated daily scans with a GitHub Actions cron workflow handling timezone/DST correctly, and Discord webhook notifications that batch and de-duplicate newly discovered postings.
- Designed the system to avoid scraping or credential-based access entirely, relying only on public board APIs and keeping webhook secrets out of source control.

Education

San Francisco State University **Expected May 2027**
Bachelor of Science in Computer Science | San Francisco, CA

- Honors: Dean's List (Fall 2024, Spring 2025, Fall 2025)
- Relevant Coursework: Data Structures, Machine Structures, Analysis of Algorithms, Operating System Principles, Intro to Database Systems, Software Development, Intro to Web Software Dev
